When you are in the middle of one of the most dangerous crashes, RollTek can offer you increased protection in the blink of an eye.

More than 50% of heavy truck driver fatalities happen in a rollover. That’s more than HALF.

With a high center of gravity and a constantly shifting load, concrete mixers are at an increased risk for this kind of accident. That’s why IMMI® created RollTek®, a side roll airbag protection system that can give your drivers a better chance to walk away from one of the worst kinds of crashes they can face.

The only side roll protection technology of its kind, RollTek is proven in the field to increase safety and survivability in rollovers involving concrete mixers. Combining airbag protection with the latest in seat belt technology, RollTek works in the blink of an eye and can significantly reduce the potential for death or serious injury.
RollTek for Ready Mix Concrete Mixers

RollTek is available on vehicles from these quality OEMs:

**Heavy Duty Truck**
- Peterbilt: 567, 367, 365
- Volvo: VHD
- Kenworth: T880
- Mack: Granite
- Western Star: 4700, 4800, 4900
- International: HV Series, HX Series
- Freightliner: 122SD

**Medium Duty Truck**
- Peterbilt: 348
- International: HV Series, MV Series

Side Roll Protection You Can TRUST

**How it Works:**

When a sensor inside the cab detects an imminent rollover, it initiates three events, all happening in a quarter of a second.

1. The seat belt pretensioner tightens the belt around the driver, holding them securely in their seat.
2. The seat pull-down system drops the suspension seat to its lowest setting, increasing survivable space and reducing head contact with the interior and roof.
3. An airbag deploys to cushion the head and neck.
