## Go from Ow to Wow!

Whether riding in the desert or taking on bogs and muddy terrain in the woods, UTV riders love the comfort and enhanced safety of IMMI's Click6. With six points of protection and one point of connection™, the Click6 harness stands out from the rest. Unlike other static harnesses, Click6 doesn't hold you hostage against your seat. No more unbuckling to reach something off the dash, or to look out your door to make sure you'll miss an obstacle below. Click6 gives you freedom to move, but holds you in safe and tight when you need it to.

And wait until you experience how fast and easy it is to buckle up!

- Buckle up with one easy click.
- Retractable shoulder belt allows more freedom of movement compared to other belts, and securely locks when needed for safety.
- Easy to buckle and adjust, even when wearing your helmet and gloves.
- No uncomfortable crotch straps.
- Secure restraint allows for better vehicle control and less ride fatigue.
- CAPE® Tested for safety.

CLICK6

WORK HARD, PLAY HARDER, AND COME HOME SAFE

IMMI's Click6 UTV harness gives you the freedom to move without sacrificing the safety of buckling up.

Click6 can be mounted on the following models as an aftermarket accessory purchase through Polaris:

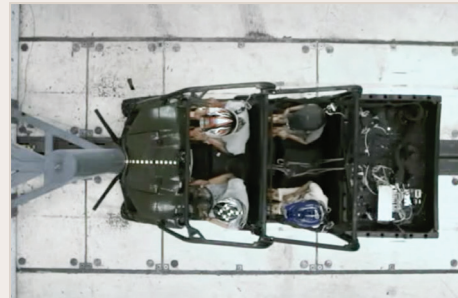

- RZR1000 2014 to present
- RZR 900 2015 to present

Offering a more comfortable ride, the Click6 is easier on your shoulders, and there is none of the uncomfortable cinching that can come from a 5-point restraint.

As the Industry Leader,  
We Drive Safety.

## What sets us apart:

Until CAPE®, the Center for Advanced Product Evaluation, stepped in, very little crash testing had been done for the UTV market. They set out to change that and they succeeded. CAPE has crashed, smashed, and rolled a number of UTVs to test everything from vehicle integrity to harness and seat belt safety. Whether you use a UTV to play hard or work hard, CAPE is working to make them safer.

IMMI reminds you to always buckle up.
